

Question1:

Write a Python program that takes a user's age as input, checks whether it's a valid number, and prints:

- "You are an adult" if age ≥ 18
- "You are a minor" if age < 18
- "Invalid input" if the input is not a number

Example Output:

Enter your age: 21

You are an adult

Question 2: List and Dictionary Manipulation**Question:**

You have the following list of student names and their marks:

```
students = [("Alice", 85), ("Bob", 72), ("Charlie", 90)]
```

Write a program to:

1. Convert this list into a dictionary.
2. Add a new student ("David", 78) to it.
3. Print the names of students who scored above 80.

Question : OOP — Class and Object**Question3:**

Create a class called Car with attributes brand, model, and year.

Add a method car_info() that prints the full car information.

Then, create two objects of the class and call the method for each.

Example Output:

Brand: Toyota, Model: Corolla, Year: 2020

Brand: Honda, Model: Civic, Year: 2022

Question4:

Create a base class called Animal with a method sound().

Create two subclasses Dog and Cat that override the sound() method.

Then write a function make_sound(animal) that calls the sound() method of any given animal object.

Expected Output:

Dog says: Woof!

Cat says: Meow!
